Story

Target Gutenberg!

Mainz in the year 1452: in Johannes Gutenberg's printer shop the Bible is supposed to be printed with the help of the new technique. But the mission seems to be pending below an unfortunate star: a burglar steals an important parchment and Gutenberg receives an anonymous letter. Together with his friend Elsa, the apprentice Friedel starts to trail follow the blackmailer's trails...

Johannes Gutenberg became famous through the ingenious invention of the moveable letters. But this new technique made him not only friends... Our new title in the "Research Mysteries" series describes the obstacles Gutenberg had to contend with and delivers interesting facts of his biography.

Our series "Research Mysteries" offers readers of 10 and up an exciting look at the world of inventions, technology and science. Each volume revolves around an important figure in the history of science, against whom a crime has been committed. The case is cleared up by young detectives - with the help of the reader, since, as usual in the Mysteries series, there are tricky puzzles to be solved at the end of every chapter. Science is made real for young readers in the process!
